Technical Evaluation

Overview

Create a web page which loads a dynamically generated table with the column names given below and four rows containing the data given below. The columns should be randomly ordered each time the page gets generated and the data should stay under the relevant column. There should be a button which would regenerate the table.

Columns

Colour, Number, Name, Animal

Rows

Colour   - Red, Blue, Green, Orange

Number   - 13, 16, 18, 19

Name   - Sarah, Adam, Ben, John

Animal   - Dog, Cat, Mouse, Tiger

Use PHP, Javascript and HTML to create this solution.
